The matter was discussed at the National Assembly (Farmers) Committee's maiden session held here on Wednesday. Replying to a question on the farmers' income, the minister said it was in accordance with the policies of the government that the best of farmers should come to the capital to receive awards. It was also hoped that farmers of the state would come to the capital and avail the award. The Marwari Chamber of Commerce & Industry has appealed to the government and the chief minister to grant the fourth time farm income augmentation scheme to the people of the state in order to give them an opportunity for self-dependence. The Chamber said the income augmentation scheme should be effective from April-May of each year so that the banks are able to grant the loans to the farmers at a more competitive rate, thus enabling them to earn more. "In 2012-13, Marwari banks were giving loans to farmers at a rate of 1

However, certain fixture installations may also benefit from the use of a dedicated faucet having a higher flow rate. In many instances, it is desirable to provide single-handle faucets that may be connected to a low-flow faucet fixture that includes a drain port. In such a case, the single handle faucet may be used independently of the low-flow fixture. In other words, the single handle faucet may be installed for use without regard to the presence of the drain port, or vice versa. One problem with the use of such a water supply system is that installation of such a water supply system may be problematic when the fixture with the water supply system is to be removed and/or installed. For example, during removal of such a fixture, it is often the case that the water supply system may not be removed with the fixture. This is because the faucet handle would then be fixed to the fixture, and therefore, would not allow the faucet handle to be removed therewith. Accordingly, a need exists for a water supply system having a faucet handle that may be configured to be used in two different water supply systems with different flow rates.Effects of chronic amphetamine treatment on neuropeptide Y-like immunoreactivity in the rat locus coeruleus. In the present investigation we have studied the long-term effects of repeated amphetamine treatment on neuropeptide Y (NPY)-like immunoreactivity in the locus coeruleus (LC) of the rat. One injection of 1 mg/kg amphetamine given i.p. 60 min prior to sacrifice was found to produce an increase in NPY-like immunoreactivity in 6d1f23a050
